

Sirs:

I have been a user of the Amateur Radio 160 meter band (1.8-2.0 Mhz) for years, 98% of which was using the lower part (1.800-1.840) of the spectrum for CW type of emission. I sincerely appreciate the results of Mr. Hollingsworth in his assistance of advising that the interests of all would be served when several wide mode stations were asked to please move up the band from 1.823 Mhz. I sincerely ask that a band plan for the 1.800-2.000 Mhz amateur band be established so that only narrow bandwidth emissions be allowed below 1.843 Mhz.

Thank you for your attention,

Harold Herring W4OW (ex K4CIH, WB4WMD, W4OOW, KN4VE)
